MOAB REGIONAL HOSPITAL CORONAVIRUS GUIDELINES

UPDATED MARCH 11, 2020

Similar to the flu, most people with COVID-19 will get better on their own at home. The best treatment for COVID-19 is acetaminophen (e.g. Tylenol), ibuprofen (e.g. Advil), fluids, and rest. Remember that COVID-19 is a virus, for which there is no available anti-viral treatment, so a doctor will only be able to help you manage symptoms (i.e. fever and cough). You do not need to see a doctor unless you develop complications (i.e. difficulty breathing).

ARE YOU EXPERIENCING FLU-LIKE SYMPTOMS?

YES

ARE YOUR SYMPTOMS SEVERE? (I.E. DIFFICULTY BREATHING)

YES

Go to the Emergency Department
